

CHRISTOPHER L RUCKMAN | Senior Full-Stack Software Engineer

cruckman900@gmail.com | (740) 827-2743 | <https://lineardescent.netlify.app> | <https://github.com/cruckman900>

Pursuing opportunities to architect and build robust, high-performance systems that support real-world operations and long-term organizational growth.

Professional Summary

Senior software engineer and systems architect with 20+ years of experience designing resilient, scalable platforms for real-world business operations. I specialize in multi-tenant SaaS ecosystems, modular microservices, and cloud-native ERP architecture. My recent work includes Business As Usual (BAU), a full-service ERP platform with 40+ domain modules, event-driven workflows, tenant-per-database isolation, and a cost-optimized AWS deployment model running under \$100/month. I build systems that scale, interfaces that empower, and workflows that endure.

Core Competencies

Architecture & Platform Engineering

Microservices, multi-tenant SaaS design, event-driven systems, API gateway routing, domain-driven design, modular UI composition, cloud cost optimization

Web & Application Development

ASP, ASP.NET (VB.NET, WebForms), ASP.NET Core (C#, MVC, Razor, Blazor), RESTful APIs, React, Next.js, Node.js, Kotlin, TypeScript/JavaScript

Cloud & Infrastructure

AWS EC2/RDS/S3/CloudFront/EventBridge, Docker, GitHub Actions CI/CD, Nginx reverse proxy, environment-based configuration, observability pipelines

Backend Engineering

Entity Framework Core, SQL Server, PostgreSQL, FastAPI, Python, Express, distributed logging, background workers, event publishing/consumption

Frontend Engineering

Blazor Server/WASM, React, responsive UI systems, component-driven design, dynamic module loading, theme engines

Testing & Quality

xUnit, Moq, integration testing, structured logging (Serilog), peer code reviews, CI-based validation

Creative & UX

UI/UX prototyping, Adobe Photoshop, Blender, branding systems, documentation design

Selected Achievements

Published Author

Authored a three-book series exploring resilience and personal transformation, including original cover design, thematic branding, and grassroots marketing

Legal Advocate

Investigated litigation and consumer-targeted fraud, authored formal reports, and collaborated with regulatory agencies to support case integrity and public accountability

Continuous Professional Development

Reinforced decades of engineering experience with modern, self-directed mastery across cloud architecture, microservices, mobile development, and UI frameworks to remain current, relevant, and highly effective in today's software landscape

Education

Wheeling Jesuit University

2005 – 2008

BS – Computer Science

WV Northern Community College

2003 – 2005

AAS – Computer Programming and System Development

Professional Experience

Mphasis – Senior Software Engineer

Mar 2026 – Present

Career Break

Feb 2022 – Mar 2026

Enhance IT

Sep 2020 – Feb 2022

- Delivered production Android features using Kotlin/Java, including Chromecast SDK integrations and scalable MVVM-based components
- Collaborated in enterprise engineering workflows with code reviews, unit testing, and iterative feature delivery
- Improved app stability and performance through lifecycle-aware components and modular architecture patterns

Murray Energy Corporation – Software Developer

Apr 2018 – Feb 2020 & Nov 2016 – Aug 2017

- Built and maintained ASP.NET MVC and WebForms applications supporting operational workflows, reporting, and internal business processes
- Implemented and consumed REST APIs backed by SQL Server, improving data accessibility and system reliability
- Modernized legacy modules and improved maintainability through incremental refactoring and UI updates

Walmart – Photo Lab Associate

Aug 2017 – Apr 2018

- Assisted customers with photo printing and digital services, ensuring high-quality output and customer satisfaction
- Maintained and operated photo lab equipment, troubleshooting technical issues as needed
- Managed inventory and organized workspaces to optimize efficiency and workflow

Challenger Learning Center – Full-Stack Developer

Jan 2018 – May 2019 & Nov 2013 – Jan 2017

- Developed interactive dashboards and backend services using ASP.NET Core, enhancing mission control simulations and educational programs
- Implemented real-time communication features with SignalR to support multi-user collaboration
- Maintained and modernized legacy interfaces, improving usability and system performance

Personal Projects

Business As Usual (BAU)

- **Links:**
 - Client App: <https://businessasusual.work>
 - Admin App: <https://admin.businessasusual.work>
- A full-scale, multi-tenant SaaS ERP platform architected with modular microservices, tenant-per-database isolation, event-driven communication, and dynamic UI composition. BAU spans 40+ business domains across Financials, HR, Operations, CRM, Inventory, Logistics, and industry-specific verticals. Features include a Module Registry Service (MRS), unified API Gateway, micro-frontend loading, and a cost-optimized AWS deployment model running under \$100/month.
- **Tech:** ASP.NET Core, C#, MVC, Blazor Server, Entity Framework Core, SQL Server, Docker, AWS EC2/RDS/S3/CloudFront/EventBridge, GitHub Actions CI/CD, Serilog, Nginx, Native Android and iOS clients
- **Demo Credentials:**
 - Username: admin
 - Password: password
- **Web and API source code:** <https://github.com/cruckman900/BusinessAsUsual>
- **Android source code:** <https://github.com/cruckman900/BusinessAsUsual-Android>
- **iOS source code:** <https://github.com/cruckman900/BusinessAsUsual-iOS>

NEXTRiff

- **Links :**
 - Live Demo: <https://nextriff.netlify.app>
- A modular music tab creation and playback platform featuring real-time waveform visualization, tab parsing, metadata extraction, and cloud asset management. Designed with a React/TypeScript frontend and a FastAPI backend structured for iterative delivery and future extensibility
- **Tech:** FastAPI, Python, SQLAlchemy, React/TypeScript, Cloudinary, modular API design, component-driven UI
- **Front-end source code:** <https://github.com/cruckman900/next.riffdaddy>
- **Back-end source code:** <https://github.com/cruckman900/baselinepy.ro>
